

INDUSTRY FIRST, AUDIO ENABLED AUTO-RETAIL KIOSK

3D DIRECTED AUDIO IN AI POWERED VICKI • VIATOUCH

MyBeam technology to create a unique, interactive auto-retail kiosk experience.

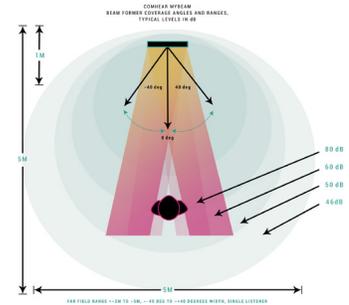

With anticipated commercial delivery in early 2018, Vicki is a personal engagement high-tech auto-retail kiosk, enabled by artificial intelligence (AI). The platform incorporates some of the tech industry's most advanced technologies including a patented shelf load sensor system, iris scanning authentication capabilities and Comhear's directed MyBeam personal audio communications.

3D AUDIO FOR FULL IMMERSION

The ability to offer true 3D audio from a single sound bar, makes the Comhear's technology the perfect solution for enhanced simulators without large audio installations.

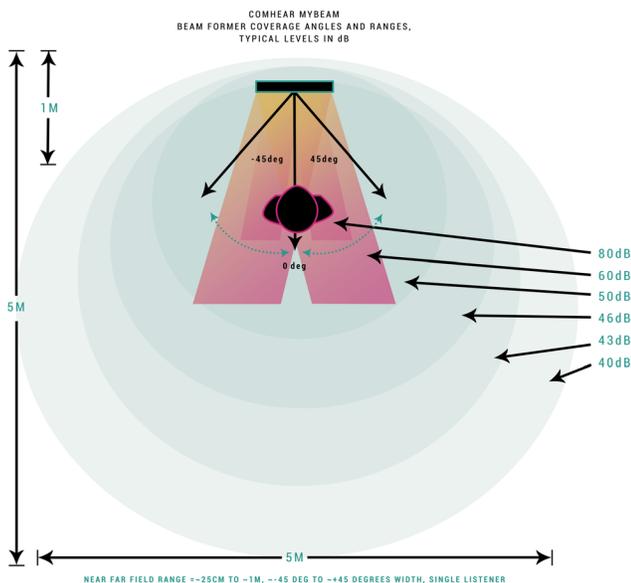

DIRECTED AUDIO

Comhear's directed audio transforms the listening experience, creating new use cases for businesses to engage their customers and provide interactive purchasing experiences.

CHANGING THE WAY THE WORLD EXPERIENCES SOUND

DIRECTED AUDIO VIATOUCH

MYBEAM™ WITH AI

"With Vicki, ViaTouch is revolutionizing the way retail and service organizations deliver products to their customers," said Tom Murn, CEO of ViaTouch Media. "To accomplish our vision, we looked for strategic partners who not only have superior technologies, but also share our culture of commitment and excellence in bringing our vision to reality. Comhear was with my team step by step, delivering the voice and specialized audio for our product with the most incredible sound technology we have heard. Their ability to create 3D sound and directed audio is truly groundbreaking."

CUSTOM SOLUTION

From the beginning, it was clear that ViaTouch was looking for a unique, interactive experience for its kiosk customers and users. Working closely with ViaTouch's design team, our engineers were able to provide the MyBeam™ audio solution ViaTouch required in a custom form factor implementation to fit the Vicki platform.

Using our patented beamforming technology, the custom array in Vicki is able to create a unique experience for customers. Along with full immersion, our directed audio allows for private transactions by using masking audio for those outside the center beam.

This creates a bubble of privacy for customers using Vicki while simultaneously offering the ability to advertise to potential customers within auditory range. All with crisp, exceptional audio quality.
